REMARKS

Claims 1, 3-12, 15-25, 27-31, and 33-41 are pending in this application.

The Office Action rejects, under 35 U.S.C. § 102, claims 1, 3-12, 14-16, 18-21, 23-31, 33-38, and 40-41 over Haarsten (U.S. Patent No. 6,112,088). The Office Action also rejects, under 35 U.S.C. § 103, claim 17 over Haarsten and Haddad (U.S. Patent Pub. No. 2003/0117978) and claims 2, 13, and 32 over Haarsten and Kallio (U.S. Patent Pub. No. 2002/0147008). While claims 2, 13 and 32 are no longer pending, the Response to Arguments section appears to impart the respective rejections onto pending claims 1, 5, 21, 31, 35, and 38. The Office Action comments on claims 22, 39, and 41, but does not explicitly reject them based on a statutory basis or cited reference and only "notes" the rejection of claims 2, 13, 32, and 41. These rejections are respectfully traversed.

Applicants assert that the Office Action has clear errors because Haarsten and Kallio, alone or in combination, do not disclose or suggest the various combinations of, for example, sending a transfer request to a second radio access network requesting transfer of an ongoing communication from a first radio access network to the second radio access network, wherein the first radio access network is a cellular radio access network and wherein the second radio access network is a wireless local area network, as recited in independent claim 1. Various variations on similar concepts are recited in independent claims 5, 21, 31, 35, and 38 (see Request for Reconsideration After Final Rejection, pages 14-15).

In particular, Haarsten and Kallio do not disclose sending a transfer request to a wireless local area radio access network to a cellular radio access network requesting transfer of a communication from the cellular radio access network to the wireless local area network (page 11).

Kallio expressly teaches the opposite of what is claimed because it teaches initiating the transfer from a cellular radio access network to a wireless local area network by sending a transfer request to a cellular radio access network. Kallio requires the use of a base station at the cellular radio access network (page 12).

Serial No. 10/804,285

Page 3

Haarsten also teaches the opposite of what is claimed. In fact, the Office Action admits Haarsten fails to teach sending a transfer request to the wireless local area network requesting transfer of an ongoing communication from the cellular radio access network to the wireless local area network. In particular, Haarsten is directed to transferring a mobile terminal from a private network to a public land mobile network (page 12).

There is no disclosure in either reference of how a transfer request can be sent to a wireless local area network to transfer an ongoing communication from a cellular radio access network to the wireless local area network. One of ordinary skill in the art would have clearly understood the teachings of the references cannot perform the claimed features because the disclosed wireless local area networks were unregistered networks and could not coordinate with the cellular radio access network to perform the claimed features. Neither reference teaches one of ordinary skill in the art how to transfer an ongoing communication from the cellular radio access network to the wireless local area network by sending a transfer request to the wireless local area network. Such is a clear factual deficiency in the rejection.

Applicants further assert the Office Actions have not provided proper motivation to combine the references. None of the allegations of the Office Actions result in proper motivation (bottom of page 12 - page 13). In fact, Kallio teaches away from the claimed invention. In particular, a handover algorithm at the base station of the first radio access network is necessary to generate the handover request (pages 15-16).

Thus Haarsten and Kallio, alone or in combination, do not disclose or suggest, for example, sending a transfer request to a second radio access network requesting transfer of an ongoing communication from a first radio access network to the second radio access network, wherein the first radio access network is a cellular radio access network and wherein the second radio access network is a wireless local area network.

Therefore, Applicants respectfully submit that independent claims 1, 5, 21, 31, 35, and 38 define patentable subject matter. The remaining claims depend from the independent claims and therefore also define patentable subject matter. Accordingly, Applicants respectfully request the withdrawal of the rejections under 35 U.S.C. § 102 and 35 U.S.C. § 103.

CONCLUSION

Based on the foregoing amendments and remarks, Applicants respectfully submit this application is in condition for allowance.

Should the Examiner believe that anything further would be desirable in order to place this application in better condition for allowance, the Examiner is invited to contact Applicants' undersigned representative at the telephone number listed below.

The Commissioner is hereby authorized to deduct any fees arising as a result of this Amendment or any other communication from or to credit any overpayments to Deposit Account No. 50-2117.

Respectfully submitted,

Matthew C. Loppnow
